Any person subsequently offering, selling or recommending the notes (a "distributor") should take into consideration the manufacturer's target market assessment; however, a distributor subject to MiFID II is responsible for undertaking its own target market assessment in respect of the notes (by either adopting or refining the manufacturers' target market assessment) and determining appropriate distribution channels.

Consequently no key information document required by Regulation (EU) No 1286/2014 (the "PRIIPs Regulation") for offering or selling the Notes or otherwise making them available to retail investors in the EEA has been prepared and therefore offering or selling the Notes or otherwise making them available to any retail investor in the EEA may be unlawful under the PRIIPs Regulation.

Factors which are material for the purpose of assessing the market risks associated with Bond

The Bonds may not be a suitable investment for all investors. Each potential investor in the Bonds must determine the suitability of that investment in light of its own circumstances. In particular, each potential investor should:

- (i) have sufficient knowledge and experience to make a meaningful evaluation of the Bonds, the merits and risks of investing in the Bonds and the information contained or incorporated by reference in this Securities Note and/or Registration Document or any applicable supplement;

-
- (ii) have access to, and knowledge of, appropriate analytical tools to evaluate, in the context of its particular financial situation, an investment in the Bonds and the impact the Bonds will have on its overall investment portfolio;
 - (iii) have sufficient financial resources and liquidity to bear all of the risks of an investment in the Bonds, including where the currency for principal or interest payments is different from the potential investor's currency;
 - (iv) understand thoroughly the terms of the Bonds and be familiar with the behaviour of the financial markets; and
 - (v) be able to evaluate (either alone or with the help of a financial adviser) possible scenarios for economic, interest rate and other factors that may affect its investment and its ability to bear the applicable risks.

1. Risk factors

Investing in bonds issued by Entra ASA involves inherent risks. Prospective investors should consider, among other things, the risk factors set out in the Prospectus, before making an investment decision. The risks and uncertainties described in the Prospectus are risks of which Entra ASA is aware and that Entra ASA considers to be material to its business. If any of these risks were to occur, Entra ASA's business, financial position, operating results or cash flows could be materially adversely affected, and Entra ASA could be unable to pay interest, principal or other amounts on or in connection with the bonds. Prospective investors should also read the detailed information, including but not limited to risk factors for the Issuer, set out in the Registration Document dated 3rd September 2019 and reach their own views prior to making any investment decision. The risk factors set out in the Registration Document and the Securities Note cover the Issuer and the bonds issued by the Issuer, respectively.

In each category below the Issuer sets out the most material risks with respect to investing in the bonds. In each category below, the Issuer sets out the most material risk, in the Issuer's assessment, taking into the negative impact of such risk on the Issuer and the bonds and the probability of its occurrence.

Financial risk

Market risk is the risk that the value of the Bonds will decrease due to the change in value of the market risk factors. The price of a single bond issue will fluctuate in accordance with the interest rate and credit markets in general, the market view of the credit risk of that particular bond issue, and the liquidity of this bond issue in the market. In spite of an underlying positive development in the Issuers business activities, the price of a bond may fall independent of this fact. Bond issues with a relatively short tenor and a floating rate coupon rate do however in general carry a lower price risk compared to loans with a longer tenor and/or with a fixed coupon rate.

Interest rate risk - is the risk that results from the variability of the NIBOR interest rate. The coupon payments, which depend on the NIBOR interest rate and the Margin, will vary in accordance with the variability of the NIBOR interest rate. The interest rate risk related to this bond issue will be limited, since the coupon rate will be adjusted quarterly according to the change in the reference interest rate (NIBOR 3 months) over the 7-year tenor. The primary price risk for a floating rate bond issue will be related to the market view of the correct trading level for the credit spread related to the bond issue at a certain time during the tenor, compared with the credit margin the bond issue is carrying. A possible increase in the credit spread trading level relative to the coupon defined credit margin may relate to general changes in the market conditions and/or Issuer specific circumstances. However, under normal market circumstances the anticipated tradable credit spread will fall as the duration of the bond issue becomes shorter. In general, the price of bonds will fall when the credit spread in the market increases, and conversely the bond price will increase when the market spread decreases.

Credit risk is the risk that the Issuer fails to make the required payments under the Bonds (either principal or interest).

Risk relating to the bonds

In respect of the Bonds issued as "Green Bonds" there can be no assurance that the relevant use of proceeds will be suitable for the investment criteria of an investor.

The Issue is a green bond issue. The purpose of the issue is financing of Eligible Projects as defined in and otherwise in accordance with the Issuer's Green Bonds Framework. There are reservations as to whether these projects meet each individual investor's investment criteria.

Depending on the development in the bond market in general and the development of the Issuer, the price of the Bonds may have increased (above par) or decreased (below par). As the Bonds have a floating reference rate, it is the market's expectations of risk premium, i.e. margin that affects the price. If the price has increased, the yield for the purchaser in the secondary market, given that the reference rate does not change, will be lower than the interest rate of the Bonds and vice versa.

Yield for the Interest Period (29 June 2020 – 29 September 2020) is 1.48% p.a. assuming a price of 100

%.

The yield is calculated in accordance with «Anbefaling til Konvensjoner for det norske sertifikat- og obligasjonsmarkedet» prepared by Norske Finansanalytikeres Forening in January 2020.
